SEPTEMBER 22<sup>ND</sup>, 2016

# Background and Goals

---

## Background

---

- WomenTechWomenYes (WTWY) holds its annual gala each summer
- Interested in placing street teams at subway stations to collect email addresses
- Those providing email address are sent an invitation to the annual gala

## Goals

---

- Provide guidance on where and when to deploy staff to collect emails for gala invite blast
- Take a first pass pinpoint stations to based on traffic
- Identify useful entrances for selected subway stations where staff should be stationed

# Assumptions & Approach

---

## Assumptions

---

- 10 street team members available 5 days a week for up to 8 hours a day
  - 5 teams of 2
- Gala taking place in June; WTWY collecting emails in the months prior

## Approach

---

- Maximization: Go to areas with the greatest traffic; rely on volume to make up for lower levels of receptivity
- Soft Targeting: Provide **starting** list of 15 stations with the greatest traffic flow in months before Gala (as starting point)
- Among selected stations identify days of the week and times of day with the greatest traffic
- Base estimates in months prior to Gala (e.g. April and May)

# Methods

---

## Data Sources

---

## Methodology

---

- MTA turnstile data: 4/3/2016 - 6/4/2016 (1,747,742 records)
- Estimate total traffic flow at each station based on entries only
- Traffic calculated contiguously within station (across turnstile)
- Trim negative values and extremes (> 99.9 percentile)
- Ignored data recorded at midnight
- Subway entrances
- Subway station geographical coordinates

# Subway Station Locations Weighted by Traffic Density

# Conclusions & Future Work

---

## Conclusions

---

- Stations with the highest traffic are what you would expect!
- Highest traffic: weekdays during morning and evening commute
  - Lunch time increase in some areas

## Next Steps

---

- Incorporate additional data to identify high-traffic stations in areas with most receptive populations
  - Median income
  - Charitable giving
  - Tech Industry
- Estimate traffic flow by time for specific station exits
